

BUT HOW DOES IT WORK?

It's called science and we mastered it. Warmers contain all natural, non toxic materials. Mix some iron, water, cellulose, vermiculite, activated carbon, salt and air and you have the ingredients for the best warmers in town!

Remember: Too much air and they will cool down. Not enough air and they won't heat up. Keep in a pocket or somewhere cozy and the warmer will heat just right!

HAVE YOU HEARD?

Warmers won't catch fire, they don't get hot enough.

Don't leave them out in the open, they won't work.

Each warmer is made for a special use, make sure you get the right one for your needs.

What do warmers and milk have in common? Nothing!! Unlike milk, Warmers won't expire, they will still work past their Validity Date.

The Warmer Handbook

Congratulations on your warmer purchase!!

You are about to embark on the greatest warmth journey known to man. It started with a caveman, a stick and a stone. It ends with you enveloped in the warmth of Grabber Warmers.

YOU HAVE YOUR WARMER, NOW WHAT?

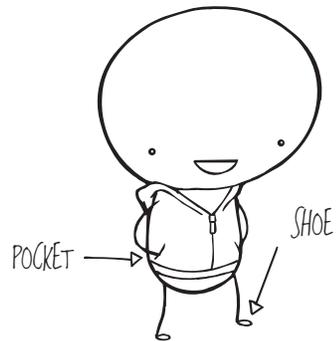

1. OPEN IT UP!

Open it up, shake it up! When you shake the warmer you expose all the goodies inside to air and start the warming process. The warmer will reach full warmth in about 30 minutes.

! WARNING!!! !

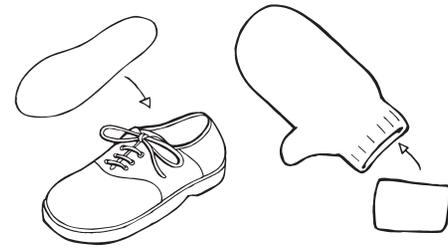

Do not leave Warmer out in the open, the heat will escape.

2. WHERE DO I PUT IT?

If it's a hand warmer, put it in your glove or pocket.
If it's a Toe or foot warmer put it under the fridge.
Just kidding, put it in your shoe silly.

3. HOW DO I GET THE MOST FROM MY WARMER?

Warmers work best in an enclosed area like a pocket or a shoe. Use Body warmers between layers of clothing for best results. Toe warmers work best when put on top of the sock above or below your toes.

4. ENJOY YOUR WARMER

5. SAVE IT FOR LATER

You can pause the warmer by storing it in air tight resealable bag.

Make sure you push out all the air before sealing it.

Use again and again until the full duration of the warmer has passed.
